A clipboard is a place where you can save information that you want to be able to grab and paste wherever you want. Some types of clipboards are easy to use, but some people find them to be complicated. This is why we suggest you to get a good clipboard with only one feature you might actually need. What is a One-Touch clipboard? The One Touch clipboard is a feature that works in such a way that you are able to grab more than one item with ease, and then easily paste them anywhere you want. To do this, you only need to press and hold a button on your computer. The button will become active, which in turn activates a window. The window contains a list of all the information you want to paste. If you press the Paste button, the window disappears and the information you saved is placed on the clipboard. Quick and easy to use – clipboard is as easy as that! Paste in one easy gesture One Touch clipboard allows you to copy and paste multiple items in one easy gesture, which is much more convenient than switching between items. To do this, simply click the button, select all the text you want, and press the paste button. You will get a popup window. How does it work? There are two ways to use it: Press and hold the button – This activates a window where you can see a list of all the items you need to paste and the default text. You can select any of them and copy it. You can then paste them anywhere on the screen using the paste button. Right-click – This is the more popular method of using a clipboard. You simply press the button and click right on the spot, which in turn reveals the window, and then you can paste the selected items. Default Clipboard – This is the default item on the clipboard. If you do not have a selected item, it will activate the window and paste the contents in the box. The default clipboard can be edited to look exactly how you want it to and display whatever you like – this is incredibly helpful for presentations, messages, and notes. I checked few similar applications from the play store and found out this is best available. It really gives you complete options to understand how to use the application effectively. It also has a nice interface and layout and the application is real cool. Publisher: The application has basic functionality but still like some of the comments have already mentioned it did not work for me till I went to the device connected via USB and stopped using Wi-Fi. Once I rebooted the device the application worked fine. I also have a problem with the applications "MicroProgramming" which is currently in a test phase in which you find a lot of bugs in the applications. I have this for a long time now and there is not a solution to this problem. Usually the bug appears a lot of time on the same place. In my case it is at the bottom of the screen and the application actually crashes the operating system. I suggest to change the publishing of "MicroProgramming", in that way the development team can fix all the bugs. This is the very great news for me, to get such application on my mobile phone. I didn't know so many applications are available on play store. Thanks for sharing this. Spotify! I was surprised after this release. Another thing I didn't realize was that this is a real portable application. The application size is only 16.5kb. I was wondering how can it be portable. It is like you can access the application form any computer anywhere. Nice Job. Thanks for sharing the tip. Conclusion I would suggest this application only to me. This really can help someone who lost the important dates of family and friends. I am not a regular user of this, But I am a regular user of Windows phone store and I think there are many of us.
