The Rekall database frontend application is a Java-based application which allows you to view the data, design and use forms, generate reports, build queries and so on. Rekall is a highly configurable and easy-to-use application. The creation and modification of forms is simple, yet powerful. You can use Rekall to perform many functions like: - view the data and retrieve records, - create reports, - build your own forms and, - export the database to a variety of file formats. All data of the database is stored in .rec files, which are similar to .sql dump files. So the database can be exported and imported in other applications easily. It supports many database formats, including MySQL, PostgreSQL, XBase, IBM DB2 and ODBC. However, Rekall supports OpenLink Virtuoso, DB2 and SQLServer 5.1 (AS/400) too. Rekall Features: - View database data and retrieve records, - Export database to a variety of file formats, - Create reports, - Create your own forms and controls and, - Import database from a variety of file formats, - Protect database with passwords, - A rich set of controls allow you to easily configure the controls which you need for each use, - Advanced data validations and constraints, - Multiple form layouts, - Admin control panel with many features and, - Many beautiful themes and skins. Requirements: JDK 1.4 or later Swing for display and Sun 1.5 or later for mouse support. Storage engine support and JDBC if you install on a 64-bit Windows operating system, a 32-bit jdk is required. Installation: 1. Unpack the distribution archive to a folder on your desktop 2. Double click on the Rekall.jar file in the directory where you unpacked the distribution, or point to the directory where the jar file exists in the command line, and then run the Rekall.bat file in it. If Rekall is not run from the directory where the Rekall.jar file is, you will need to run the Rekall.bat file from the directory where the jar file exists. For example, if you unpacked the Rekall distribution in c:\rekall\_1\_1, you would need to run Rekall.bat from

## What's New in the?

Rekall allows you to quickly and easily interact with database by writing SQL queries and display the results in a tabular form. Rekall also supports a large number of database formats and allows you to save your queries to be run again later. This tool has the following capabilities: \* View database content \* Create reports and forms \* Build complex queries \* Send queries directly from Rekall to the database server \* Display results in tabular form \* Export reports and forms \* Options to view database log, allowing you to review your log file before running an important query. Soluble polysaccharides from *Vigna angularis*. Three polysaccharides, named VA, VG and VB, were isolated from the aqueous extracts of *Vigna angularis* roots, stems and leaves. Their structures were established as arabinogalactan-protein by digestion of the polysaccharide with endo-1,4- $\beta$ -mannanase and Smith degradation. The complete structural characterization showed that the three polysaccharides were composed of Ara, GalA, Gal, Xyl, Rha, Man, and Glc. Compared with other *Vigna* polysaccharides, VA, VG and VB contained much more GalA and Glc. The neutral sugar compositions and structural features of the three polysaccharides were similar, but differed slightly. The bioactivities of polysaccharides on protecting erythrocytes from haemolysis, and delaying senescence of human skin fibroblasts, were studied. Three polysaccharides had strong scavenging activities on superoxide radicals, and VA showed better activity. The results suggested that the polysaccharides have potential in the food, and the biological activities of the polysaccharides are closely related with their structures. There is a general lack of effective therapy for treating hearing loss for the majority of individuals who are profoundly deaf. Some types of hearing loss are due to cochlear and retrocochlear disorders (e.g., sensorineural disorders, auditory neuropathy, and auditory neuropathy dysphasia). Other types of hearing loss can be due to disorders affecting the auditory periphery (e.g., auditory deficits associated with aging, auditory loss associated with noise exposure, and auditory loss associated with cochlear implants). Drug delivery, such as when administered systemically, has limitations. For example, there are risks associated with administering drugs systemically.
