Windows 7 Professional.1. Field of the Invention This invention relates to a sustained-

release formulation of a medicament for oral use. 2. Description of the Prior Art In the pharmacology of oral pharmaceutical preparations, it is desired that the pharmaceutical preparation be not swallowed at once, but after a certain period of time (sometimes on the order of about 3 hours to 2 days) be gradually and continuously released from the oral cavity and taken up from the small intestine. An example of a conventional sustained-release formulation is one which comprises a granulation consisting of a powdered active ingredient, a powdered filler, such as lactose, and a solid wall-forming material, such as hydroxypropylcellulose and starch, with the active ingredient and filler being present as an inner core and the solid wall-forming material being present as an external shell (JP-A 58-87675). This conventional sustained-release formulation, however, has a tendency to cause gastrointestinal disorders, such as diarrhea and constipation, particularly in the initial stage of the absorption period from the digestive tract.

Q: -w command not working GCC 4.7.1 (Ubuntu/Linaro 4.7.1-10ubuntu3) I don't know where the "-w" option is set, I haven't set it explicitly anywhere and I don't see anything using pkg-config or similar like I would expect. So what is the -w flag for? A: If -w is not set, gcc assumes that the standard configuration will be used. -w
