watching a movie, I got a new driver for my USB gamepad.

When I opened the gamepad I noticed it was not working. I

tried to reinstall the driver. It still did not work. I got an error message like “device has been disabled by administrator”. I tried to find the driver on the internet. It’s a USB gamepad and was produced by KME. It has the following symbol: F1, F2, F3, F4, F5, F6, F7, F8, F9, F10, F11, F12, As soon as I change the values of the volume, the gamepad is reset to its factory default. I tried to run a smart test on the device, but it does not work. But I could find the driver for Linux. When

I installed the driver on my windows laptop I noticed a lot of new files were created:
