Adobe wants Creative Cloud to be the fastest and easiest way for creative pros to get more work done, faster. To that end, today at MAX, Adobe demonstrated the beta version of new features to make it easier for experts to collaborate. The new collaborative experience ranges from convenient mobile features like editing images in a browser to tools for web, mobile and desktop that were reimagined for today's creative professionals. For the desktop product, the powerhouse feature is "Layer Bags," which preserves layers and materials. It lets you easily reuse, vary, and recombine layers and materials. Although the same feature was reworked for the web, Photoshop for web features a new version of the Bags feature, called "Layers" in a Web Browser. Other features include "Arrow Pressure API," which makes it easier to navigate photos by adding pressure-sensitive gestures to the scroll wheel. With the update, pressure-sensitive gestures work on any device, even on tablets. Polls showed that Creative Cloud members are thrilled with the overall quality of Photoshop, saying they wanted more automation and an improved user experience (UX). Since the beta release of Share for Review, Creative Cloud members lapped up the idea and Adobe has seen a strong increase in interest and requests for Share for Review. Adobe is working with royalty-free music company E-Linq and visual effects company Autodesk, among others, to develop new features for Adobe Sensei AI, the deep learning engine built into the latest Photoshop versions.
