You also get many tools that were introduced in the new version of **Photoshop CC** as well as **Lightroom CC**. These include a **new node-based selection tool**, a **new curve tool**, and more. You can find most of these tools in the **Layers** panel. You can delete zones in the layer, switch between the new and old versions, or create a copy of the layer for how to edit a whole area of a single photo. The update also brought a number of improvements to layers, such as:

- **Mask tools** - a new mask mode called "Match Color" lets you create a mask for a particular layer, then apply that mask with a new button on the Layers palette
- **Layer visibility** - gets rid of the "hide layer" option so it's just toggle layers off in the Layers palette
- **Merge layers** - a new merge options that offer to combine layers with similar textures or colours
- **Integrated website builder** - now you can use Photoshop to make websites

BELOW: Using Photoshop Lightroom 5, I would like to combine the photos together. After combining the images in Photomerge mode, three layers appear in the layer panel. The first photo is the main photo (3). I can press the mask section to key out the bike's or car's details (4). The second photo is a detail of the bike (5). I can flatten the resulting layer to combine them both (6). The third layer is the sky photo (7). I can double-click the sky area to define a mask for the photo, thus separating the two photos (8).

The final steps of this move are still underway. Our industry experience is that it is the nature of the beast for part of a product to be replaced by a new release while another part is being stabilized. For those who want to continue working with the legacy 3D features, there will be a transition path provided until consumers move to the new native 3D features. In the final stages of the transition, we will be providing an updated legacy 3D feature set as an additional option for people who prefer to continue working with those features. In addition, we will continue to support the legacy 3D feature set as long as the user is on a supported platform and version of Photoshop, and until the end of time on any supported Mac OS X version. For example, if a user's 32-bit OS X 10.9.4 installation is supported until 1 January 2023, then the legacy 3D products will be available in the CS5, CS5.1, and CS6 versions of Photoshop for use until Feb 1 2023. Adobe is phasing out the 3D features in parallel with the transition to the new 3D tools and APIs. The final releases of the

Photoshop 3D product line, including the Photoshop 3D panel and tools, will be cancelled. For now, Photoshop 3D tools and assets will continue to work and be supported, but new development and features will not be added, and will be deprecated in future releases. The Photoshop 3D panel will be deprecated soon, but the panels in other applications will be kept otherwise forward-compatible with the new, simplified panel design.
